Cadbury  
Celebrations

#ShopsForShopless

A campaign that gave every Indian street hawker an online shop they can call their own.

Diwali, the biggest festival in India sees its people buying everything they need from their local hawkers. These hawkers usually set up their stalls whenever they are able to find a place, but they often have to keep switching their areas due to lack of proper permissions and a permanent stall, affecting their business.

This year, Cadbury Celebrations attempted to give every Indian hawker a space they can call their own, their permanent virtual shop. We put QR codes in every park of Celebrations that people could scan to set up virtual shops for hawkers or simply to locate the area in their area. The campaign received an overwhelming amount of love from millions, leading to the creation of over 3000 virtual shops for India's hawkers.

# “SIRF EK HEE KYON?”

During pregnancy, most women receive Tetanus Injections. But now, you and your baby can receive protection against 3 diseases: Tetanus, Diphtheria and Pertussis. All three together. While Tetanus is a nerve disease, Diphtheria is a serious throat infection that can block airways and Pertussis is a contagious respiratory disease, which can lead to hospitalisation in infants less than 2 months of age.

Helps protect baby too

To know more about 3-in-1 Vaccination speak to your Gynaecologist

Visit: [www.gskprotect.in/3in1vaccination](http://www.gskprotect.in/3in1vaccination)

# BLINK TO SPEAK

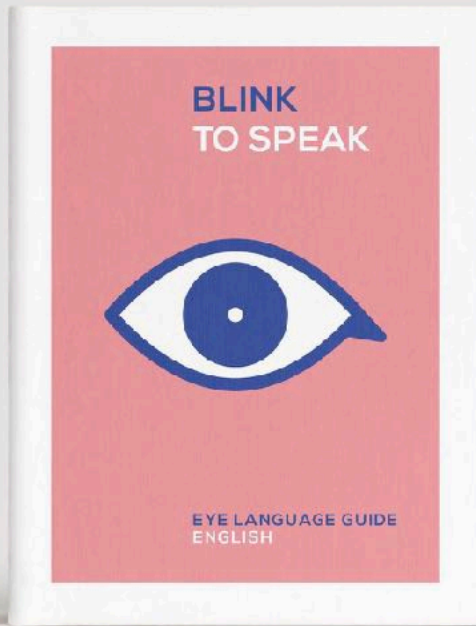

The world's first eye language by NeuroGen Brain & Spine Institute & Asha Ek Hope Foundation, to help paralysed patients with speech difficulty.

## PROBLEM

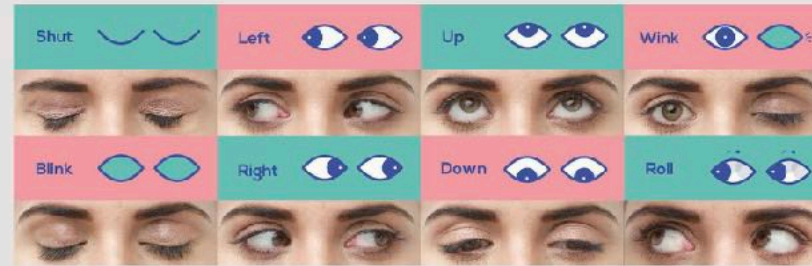

An estimated 60 million patients of ALS, MNDs, spinal cord injuries, and paralysis live all around the world with a paralysed body and an alert mind. They can't speak, write or use any sign language. Every day they struggle to communicate their needs and desires to their caregivers. The alternative methods of communication like, the E-TRAN board, are very tedious and the hi-tech assistive tools unaffordable. These patients and their families live for many years suffering, with no power to communicate.

## SOLUTION

There is one body part that doesn't betray most patients till the very end. The eyes. So we created the world's first eye language. After months of research with patients, nurses and doctors we curated the most commonly needed messages by patients. Using the eye language even someone with a completely paralysed body can say anything, just by using 50 simple eye movements.

## EIGHT ALPHABETS OF BLINK TO SPEAK

"For 2 years I couldn't say a word to my family. I was at their mercy, accepting whatever they gave me. I wish I had Blink to Speak then."

- Jehu Julius, A quadriplegic patient, NeuroGen BS

Now, eye language to beat speech difficulty.

We're the 1st eye language guide made in India to help the paralysed internet without speech.

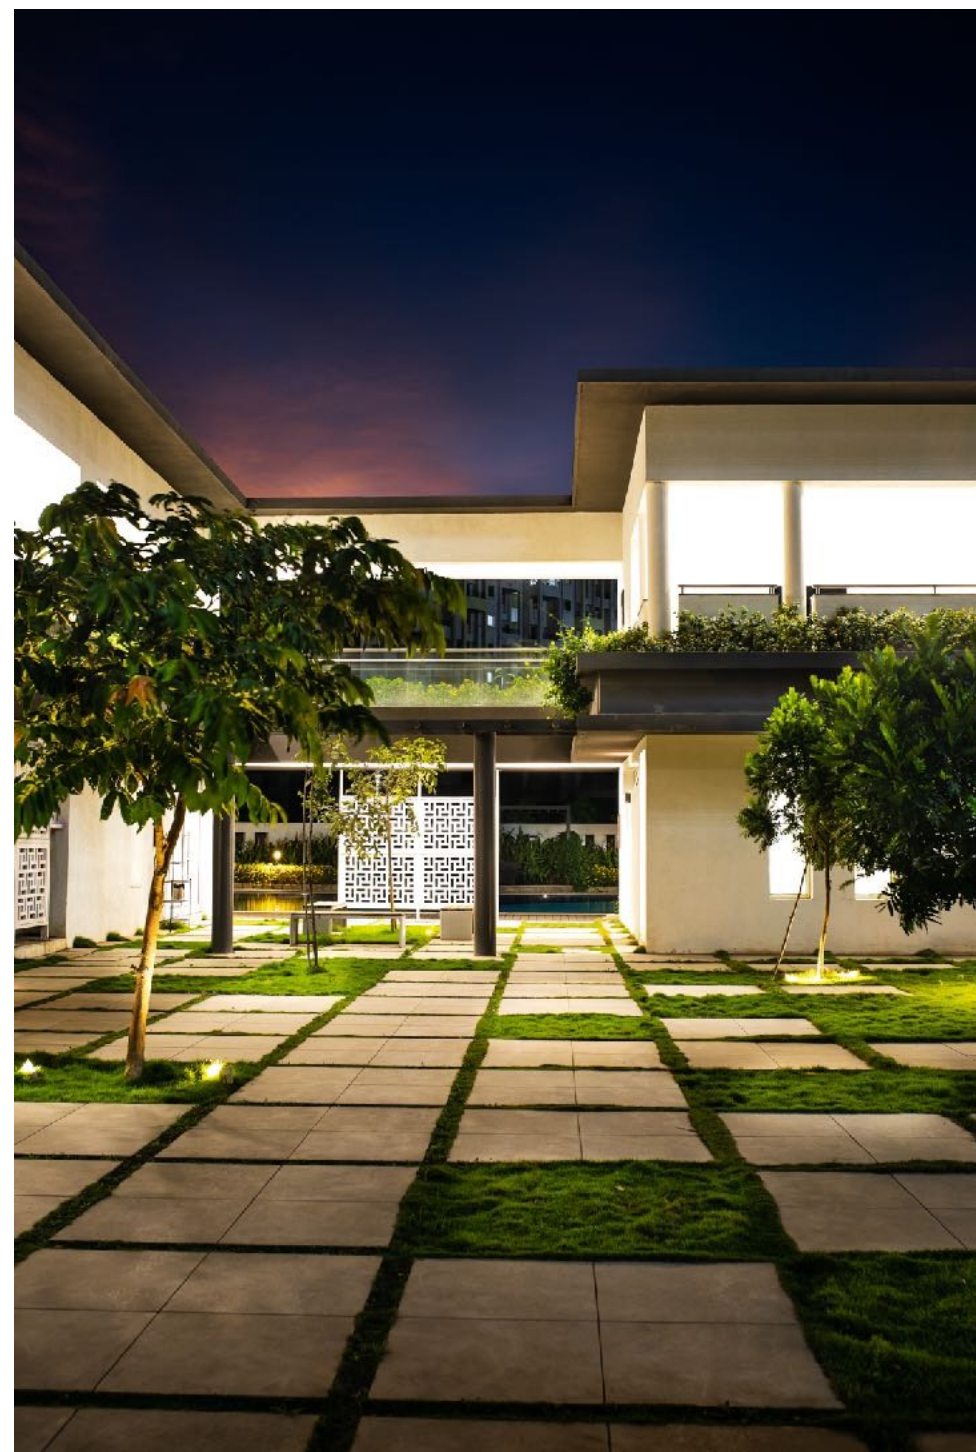

Go to [blinktospeak.com](http://blinktospeak.com) to download the guide for free and get tutorials.
